

The Weekly Revenue Leak Check

Free Sample

A 10-minute manual checklist for reviewing potential revenue leak points between CRM, billing, payments, renewals, and automation workflows.

Page 1: 12 Common Revenue Risk Areas Small SaaS Teams Should Review Weekly

#	Risk	Why it matters	What to check
1	Closed-won deal exists, but no invoice was created.	Revenue can be delayed or completely missed if sales and billing are not reconciled.	Compare closed-won deals from the last 7 days with issued invoices.
2	Failed payment is not reflected in CRM.	A customer can look active in CRM while payment has already failed.	Review failed payments and confirm CRM customer status is updated.
3	Renewal date is within 30 days, but no owner is assigned.	Renewals without ownership become last-minute fire drills or silent churn.	List renewals due in the next 30 days and assign an owner.
4	Trial ended, but no conversion follow-up exists.	Trial users can disappear simply because no one followed up.	Check trials that ended in the last 7 days and confirm next action.
5	Plan change is not reflected in billing.	Upgrades, downgrades, and discounts can create billing mismatches.	Compare plan changes in CRM or product data with billing records.
6	Overdue invoice has no assigned owner.	Unowned overdue invoices turn into ignored receivables.	Review overdue invoices and assign one owner per account.
7	Workflow failed, but no one reviewed the log.	Automation failures can break billing, onboarding, alerts, or handoffs silently.	Check failed workflows from the last 7 days and record owner and action.
8	Webhook failed, but retry policy is missing.	A single failed webhook can create invisible data gaps across tools.	Confirm failed webhooks have retry logic or manual recovery steps.
9	Customer usage dropped, but no risk flag exists.	Usage drops often show churn risk before the customer says anything.	Review accounts with usage decline and mark potential renewal risk.
10	Support tickets increased, but renewal risk was not updated.	Support spikes can signal account health problems before renewal.	Compare high-ticket customers with renewal and account health status.
11	Contract value and billed amount do not match.	Pricing or billing errors directly affect revenue recognition and cash flow.	Compare contract value, plan, discounts, and actual billed amount.
12	No weekly owner/action tracker exists.	Even when potential risks are identified, they can be overlooked if no one owns the next step.	Confirm each risk has an owner, deadline, and next action.

Page 2: The 10-Minute Weekly Revenue Leak Check

Use this once per week. The goal is not to build a perfect dashboard. The goal is to structure a manual review of overlooked revenue risks before they become avoidable operational issues.

Check	Question	Owner	Status	Notes
Invoice	Are there closed-won deals from the last 7 days without invoices?	Ops	[]	
Payment	Are failed payments reflected in CRM or customer status?	RevOps	[]	
Renewal	Are renewals within 30 days assigned to an owner?	Sales/Ops	[]	
Trial	Did any trial end without a conversion or follow-up action?	Founder/Ops	[]	
Plan Change	Were upgrades, downgrades, or discounts reflected in billing?	Ops	[]	
Overdue Invoice	Does every overdue invoice have a clear owner?	Finance/Ops	[]	
Workflow	Did any automation fail in the past 7 days?	Ops	[]	
Webhook	Did any webhook fail without retry or recovery?	Eng/Ops	[]	
Customer Risk	Did usage drop or support tickets spike for any account?	CS/Ops	[]	
Billing Match	Do contract value and billed amount match?	Finance/Ops	[]	
Status Sync	Are refunded, churned, or downgraded customers correctly marked?	RevOps	[]	
Action	Does every risk have an owner, deadline, and next action?	Founder/Ops	[]
